Re: Horsham Water and Sewer Authority
Infrastructure Improvement

Dear

This is to advise you that the Horsham Water & Sewer Authority is planning an upgrade to the water infrastructure in your area. This will include a combination of water main replacement, relining and additional water main installation to improve water quality and flow in your neighborhood. As part of the design work on behalf of the Authority, surveyors working for the Authority's consulting engineering firm, Gilmore & Associates may be present in your neighborhood.

Included with this letter is a conceptual plan for the first phase of work which is tentatively expected to begin late summer/early fall 2018. Note that this schedule is highly tentative as design is ongoing. Please be aware that the precise route for the proposed new water main shown in pink on the map has not yet been determined.

Letter communication of future updates is extremely challenging due to the large scope of this project. In order that we may keep you updated as more definitive information becomes available, residents are strongly encouraged to sign up for email updates on the project. You may do so by going to the Authority's website at <https://www.horshamwater-sewer.com/customer-updates>. After entering your contact information, scroll down to the projects section and select "County Line Road area infrastructure improvements". **Please be assured that your email address will only be used for the purpose of informing you of Authority business.**

Very truly yours,

Tina M. O'Rourke
