Re: PFAS Private Well Contamination  
Connection to Public Water

Dear Resident,

We are writing to inform you that the Authority has awarded a contract to DOLI Construction Corporation, of Chalfont, PA to perform your connection to the public water supply. The scope of work includes a main extension, the installation of a service connection to the new water main fronting your property, connection of the home to the new main and permanent abandonment of your existing well.

A construction schedule for the work has not yet been established due to supply chain issues associated with COVID that have significantly impacted the contractor's ability to procure materials necessary to perform the work. In the meantime, and prior to the start of construction you may see the contractors performing preconstruction video-taping. This is a requirement of the contract in order to document existing conditions throughout the work area and ultimately ensure that the area is properly restored.

At some point prior to your connection, you will be contacted by a DOLI representative to request access to your home to determine the best location for the service to enter the structure.

If you have not done so already, you are encouraged to sign up for email updates on the project. When more definitive information becomes available regarding the schedule for the work, it will be posted to our website. You may sign up to receive this and subsequent updates about the project by going to the Authority's website at <https://www.horshamwater-sewer.com/customer-updates>. After entering your contact information, scroll down to the projects section and select "MIRIA Main Extensions Phase II". Please be assured that your email address will only be used for informing you of Authority business.

We look forward to the opportunity to serve you.

Very truly yours,

Tina M. O'Rourke  
Business Manager
